WIDE RANGE Gel Preparation Buffer (4x) for PAGE

Gradient gels offer a much wider separation range of proteins than single percentage gels. However, casting gradient gels is more difficult and labor intensive. WIDE RANGE Gel Preparation Buffer offers a gradient gel-like separation on a single percentage gel by simply mixing it with acrylamide/ bisacrylamide gel casting solution. The gel can be used with the common sample buffers and running buffers. It is also suitable for standard staining methods including CBB and silver staining.

» Simple casting procedure

WIDE RANGE Gel Preparation buffer is a 4x concentrated neutral pH buffer. It can be used for preparation of both stacking gel and separation gel by replacing the Tris-HCl buffer in Laemmli buffer system.

» Improved stability and strength

The increased tensile strength allows easy handling even a low percentage gel. The neutral pH buffer improves the stability of gel resulting in a longer shelf life than the gel with Laemmli buffer system.

» A wide separation range

WIDE RANGE Gel provides a much greater separation range than the gel casted with a conventional Laemmli buffer system.

Chemiluminescent Western Blotting Substrates

Chemi-Lumi One is a series of high sensitive luminol-based chemiluminescence assay kits for Western Blotting. Three types of chemiluminescent substrates are available for Western blot detection with horseradish peroxidase enzyme (HRP).

Product Name	Chemi-Lumi One L	Chemi-Lumi One Super	Chemi-Lumi One Ultra

● Chemi-Lumi One L

- » Suitable for optimization of target proteins
- » Reasonable price
- » Detect wide range of protein concentration

Comparison of sensitivity with competitors

Chemi-Lumi One L offers similar sensitivity to T and W company's products and higher sensitivity than G company's products.
