10% OFF for 20 tests & 50 tests

CELL CULTURE CONTAMINATION

MYCOPLASMA:
M. orale
M. hyorhinis
M. arginini
M. fermentans
M. hominis
ACHOLEPLASMA:
A. laidlawii

MycoStrip™ - Mycoplasma Detection Kit

Based on isothermal PCR for easy and fast detection of mycoplasma contamination in cell cultures

- **Simple** – easy to perform, no special lab equipment required
- **Rapid** – <15mins hands-on time, result in 1 hour
- **Clear** – easy result interpretation
- **Specific** – detects 6 species that accounts for 95% of all mycoplasma contaminants. Do not cross react with other bacteria, fungal or mammalian DNA
- **Sensitive** – detect as low as 10-10² CFU/ml

WHAT IF MY TEST IS POSITIVE?

Don't stress! Your culture is easily treatable with InvivoGen's anti-mycoplasma reagents.

Treat your culture and eradicate the contamination using **Plasmocin™** or **Plasmocure™**. Upon completion of the treatment (~2 weeks), re-test using MycoStrip™.
